New

Filter Regulator Series AC

Regulator Air Filter Lubricator • The bowl is completely protected from the environment. Safety improved.

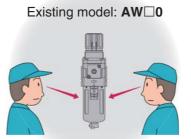

Transparent bowl guard

Better visibility: 360°

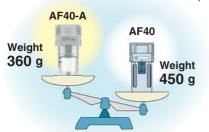

• Condensate can be monitored from anywhere.

■ Light weight: Max. 90 g Reduction

* Except AW

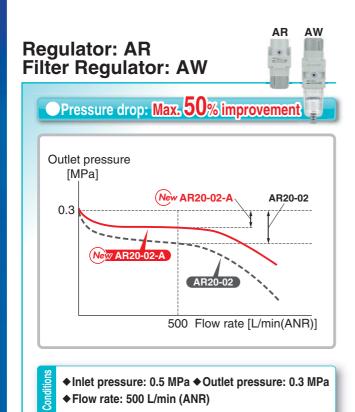

Metal related corrosion does not occur.

Resin body does not rust.

New Spacer Modular connection Spacer with bracket Retainer Step 1 Mount the product by lining up the mating surface of the spacer with the new bracket. Insert the retainer into the spacer bolt and tighten the nut. (Temporary) Step(2) Nut • Tighten the nut with the hexagon wrench. Interchangeable with existing products • New spacer can be connected to existing AF, AR, AL, AW series. Existing spacer cannot be used for new AR□-A, AF□-A, AL□-A, AW□-A series.

Simple Specials System

A system designed to respond quickly and easily to your special ordering needs.

Short lead times
This system enables us to respond to your special needs, such as additional machining, accessory assembly, or modular unit, and deliver such special products as quickly as standard products.

Repeat orders

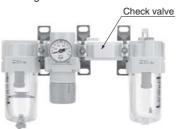

Once we receive a Simple Special part number from your previous order, we will process the order, manufacture the product, and deliver it to you.

Attachment List

Check valve

Page 22

■A check valve with intermediate branch port can be easily installed to prevent a back-flow of lubricant when branching the air flow and releasing the air on the outlet side of the regulator.

- Air Filter + Regulator + Lubricator (AC□0-A)
- Filter Regulator + Lubricator (AC□0A-A)

*Port size: Except 06

Pressure switch

Page 23

■A compact integrated pressure switch can be easily installed and facilitates the pressure detection of the line.

- Air Filter + Regulator + Lubricator (AC□0-A)
- Filter Regulator + Lubricator (AC□0A-A)
- Air Filter + Regulator (AC□0B-A)
- Air Filter + Mist Separator + Regulator (AC□0C-A)
- Filter Regulator + Mist Separator (AC□0D-A)

T-shaped spacer

Page 23

■Using a T-shaped spacer facilitates the branching of air flow.

- Air Filter + Regulator + Lubricator (AC□0-A)
- Air Filter + Regulator (AC□0B-A)
- Air Filter + Mist Separator + Regulator ($AC \square 0C-A$)

3-port valve for residual pressure release (Page 24)

■With the use of a 3-port valve for residual pressure release, pressure left in the line can be easily exhausted.

- Air Filter + Regulator + Lubricator (AC□0-A)
- Filter Regulator + Lubricator (AC□0A-A)
- Air Filter + Regulator (AC□0B-A)
- Air Filter + Mist Separator + Regulator (AC□0C-A)
- Filter Regulator + Mist Separator (AC 0D-A)

Cross spacer

Page 24

■Pipings are possible in all 4 directions.

*Needs to be ordered by single unit.

Piping adapter

Page 25

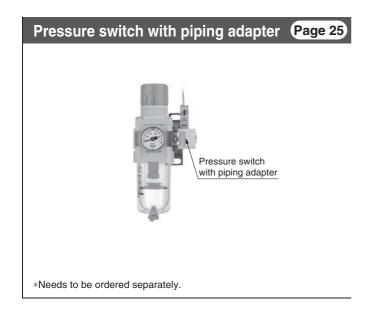

■A piping adapter allows installation/removal of the component without removing the piping and thus makes maintenance easier.

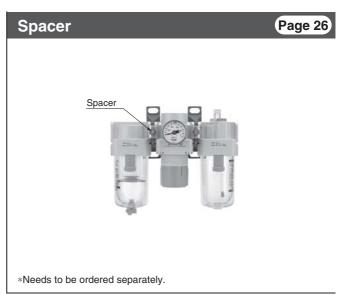

*Needs to be ordered by single unit.

Flow Characteristics (Representative values)

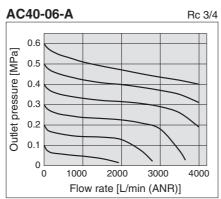

Condition: Inlet pressure 0.7 MPa

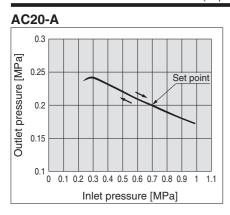

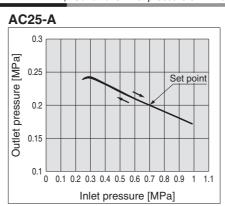

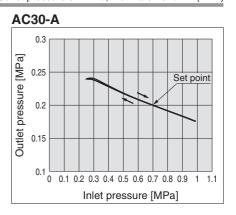

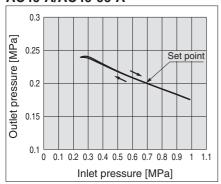

Pressure Characteristics (Representative values) Conditions: Inlet pressure 0.7 MPa, Outlet pressure 0.2 MPa, Flow rate 20 L/min (ANR)

AC40-A/AC40-06-A

Specific Product Precautions

Be sure to read before handling. Refer to back cover for Safety Instructions, "Handling Precautions for SMC I Products" (M-E03-3) and the Operation Manual for F.R.L. Precautions.

Piping

⚠ Warning

1. When mounting a check valve, make sure the arrow (IN side) points in the correct direction of air flow.

Air Supply

Caution

1. Use an air filter with 5 µm or less filtration rating on the inlet side of the valve to avoid any damage to the seat caused by dust when mounting a 3-port valve for residual pressure release on the inlet side.

Mounting and Adjustment

∕∿ Caution

1. When the bowl is installed on the air filter, filter regulator, lubricator, mist separator, or micro mist separator, install them so that the lock button lines up to the groove of the front (or the back) of the body to avoid drop or damage of the bowl.

Selection

∕!\ Caution

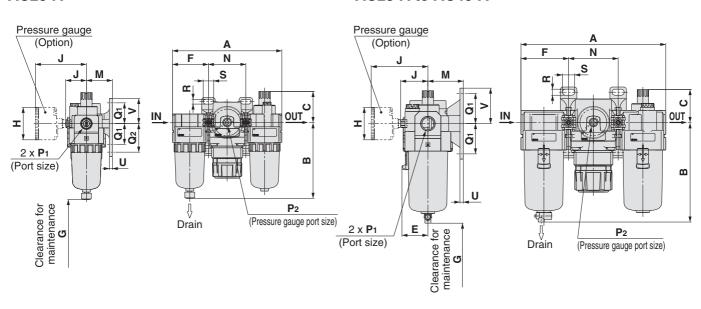

- 1. When releasing air at the intermediate position using a T-shaped spacer on the inlet side of the lubricator, lubricant may back flow. Therefore, releasing air that does not contain traces of lubricant is not possible.
 - To release air that does not contain traces of lubricant, use a check valve (Series AKM) on the inlet side of the lubricator to prevent a backflow of the lubricant.
- 2. If a residual pressure-release 3-port valve is mounted on the inlet side of the lubricator, causing a backflow of air, it can result in a backflow of oil or damage to internal parts. Please, locate it on the outlet side of the lubricator.
- 3. An F.R.L. unit shipped from the plant has its model number labeled. However, components that are combined together during the distribution process do not have a label on them.

Note 1) □ in part numbers for a round pressure gauge indicates a type of connection thread. No indication is necessary for R; however, indicate N for NPT. Please contact SMC regarding the connection thread NPT and pressure gauge supply for psi unit specifications.

Note 2) For F.R.L. units, port sizes without () are standard specifications.

Note 3) Separate interfaces are required for modular unit.

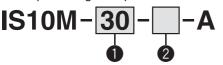

Check Valve: (K) 1/8, 1/4, 3/8

A check valve with intermediate air release port can be easily installed to prevent a backflow of lubricant when redirecting the air flow and releasing the air on the outlet side of the regulator.

Pressure Switch

A compact integrated pressure switch can be easily installed and facilitates the pressure detection of the line.

- Semi-standard: Select one each for a to c.
- · Semi-standard symbol: When more than one specification is required, indicate in alphanumeric order. Example)IS10M-30-6LP

		_		Symbol	Description	Body size 20 30 40

^{*} Separate spacers are required for modular unit.

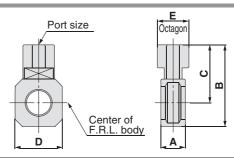

T-shaped Spacer: (T) 1/8, 1/4, 3/8

Using a T-shaped facilitates the branching of air flow.

Caution on Mounting

If a T-shaped spacer is used on the IN side of the lubricator, lubricant may be mixed. Use the AKM series check valve to avoid such possibility.

Model Note)	Port size	Α	В	C	D	Е	Applicable model

- Note) ☐ in model numbers indicates a thread type. No indication is necessary for Rc; however, indicate N for NPT, and F for G.

 * Separate interfaces are required for modular unit.
- * Refer to the attachment table on page 22 for standard port sizes when using with the AC.

Pressure Relief 3 Port Valve: (V)

With the use of a 3-port valve for residual pressure release, pressure left in the line can be easily exhausted.

- Semi-standard: Select one each for a to b.
- Semi-standard symbol: When more than one specification is required, indicate in alphabetic order.

Example) VHS30-03A-RZ

Cross Spacer: 1/8, 1/4, 3/8, 1/2

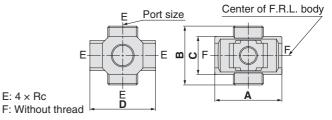

Pipings are possible in all 4 directions. IN/OUT ports are not machined for threads.

Please contact SMC if threaded (machined) ports are required.

Caution on Mounting

- 1. When mounting a cross interface directly on the IN side of the lubricator, be sure to use the AKM series check valve between the lubricator and cross interface.
- 2. Factory mounting of a cross interface on the AC model is available as a special order.

- Note) \square in model numbers indicates a thread type. No indication is necessary for Rc; however, indicate N for NPT, and F for G.
- * If threaded IN/OUT ports are required, they are available as a special order. Please contact SMC.
- * Two hexagon socket head plugs are included in the package.

E: 4 × Rc

Piping Adapter: 1/8, 1/4, 3/8, 1/2, 3/4

A piping adapter allows installation/removal of the component without removing the piping and thus makes maintenance easier.

Note 2) Minimum operating pressure: N.O. type-0.1 MPa; N.C. type-0.1 MPa (AD27-A) and 0.15 MPa (AD37-A/47-A). Please consult with SMC separately for psi and °F unit display specifications.

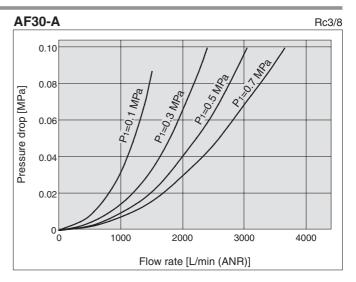

Note 3) Please consult with SMC for details on drain piping to fit NPT or G port sizes.

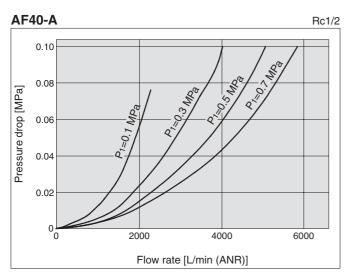

Note) Bowl assembly for the AF20-A to AF40-A models comes with a bowl O-ring.

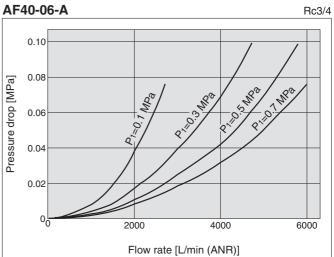

Series AF20-A to AF40-A

Flow Characteristics (Representative values)

Specific Product Precautions

Be sure to read before handling. Refer to back cover for Safety Instructions, "Handling Precautions for SMC Products" (M-E03-3) and the Operation Manual for F.R.L. Precautions.

Design / Selection

⚠ Warning

1. The standard bowl for the air filter, filter regulator, and lubricator, as well as the sight dome for the lubricator and bowl guard are made of polycarbonate. Do not use in an environment where they are exposed to or come in contact with organic solvents, chemicals, cutting oil, synthetic oil, alkali, and thread lock solutions.

Effects of atmosphere of organic solvents and chemicals, and where these elements are likely to adhere to the equipment. Chemical data for substances causing degradation (Reference)

Maintenance

⚠ Warning

1. Replace the element every 2 years or when the pressure drop becomes 0.1 MPa, whichever comes first, to prevent damage to the element.

Mounting and Adjustment

⚠ Caution

When the bowl is installed on the air filter, install them so that the lock button lines up to the groove of the front (or the back) of the body to avoid drop or damage of the bowl.

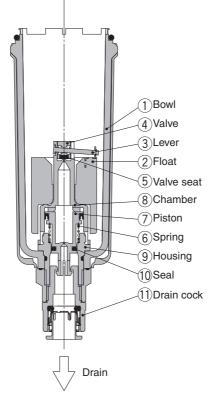

Series AF20-A to AF40-A

Working Principle: Float Type Auto Drain

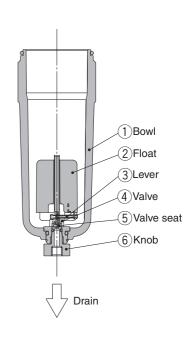

N.O.type: AD38-A, AD48-A

1 Bowl 4 Valve 3 Lever 2 Float 5 Valve seat 8 Chamber 6 Spring 7 Piston 9 Housing 10 Seal 11 Drain cock

N.C.type: AD37-A, AD47-A

Compact auto drain N.C. type: AD27-A

When pressure inside the bowl is released:

Drain

When pressure is released from the bowl 1, piston 7 is lowered by spring 6.

The sealing action of seal 10 is interrupted, and the outside air flows inside the bowl 1 through housing hole 9 and drain cock 11.

Therefore, if there is an accumulation of condensate in the bowl ①, it will drain out through the drain cock.

When pressure is applied inside the bowl:

When pressure exceeds 0.1 MPa, the force of piston \bigcirc surpasses the force of spring \bigcirc and the piston goes up.

This pushes seal 10 up so that it creates a seal, and the inside of the bowl 1, is shut off from the outside air.

If there is no accumulation of condensate in the bowl ① at this time, float ② will be pulled down by its own weight, causing valve ④, which is connected to lever ③, to seal valve seat ⑤.

When there is an accumulation of condensate in the bowl:

Float ② rises due to its own buoyancy and pushes open the seal created by the valve seat ⑤

This allows the pressure inside the bowl 1 to enter the chamber 8. The result is that the combined pressure inside chamber 8 and the force of the spring 6 lowers the piston 7.

This causes the sealing action of seal ① to be interrupted, and the accumulated condensate in the bowl ① drains out through the drain cock ①. Turning drain cock ① manually counterclockwise lowers piston ②, which pushes open the seal created by seal ①, thus allowing the condensate to drain out.

• When pressure inside the bowl is released:

Even when pressure inside the bowl 1 is released, spring 6 keeps piston 7 in its upward position.

This keeps the seal created by the seal (1) in place; thus, the inside of the bowl (1) is shut off from the outside air.

Therefore, even if there is an accumulation of condensate in the bowl 1, it will not drain out.

When pressure is applied inside the bowl:

Even when pressure is applied inside the bowl ①, the combined force of spring ⑥ and the pressure inside the bowl ① keeps piston ⑦ in its upward position.

This maintains the seal created by the seal 1 in place; thus, the inside of the bowl 1 is shut off from the outside air.

If there is no accumulation of condensate in the bowl 1 at this time float 2 will be pulled down by its own weight, causing valve 4, which is connected to lever 3, to seal valve seat 5.

When there is an accumulation of condensate in the bowl:

Float ② rises due to its own buoyancy and pushes open the seal created by the valve seat ⑤. Pressure passes from the bowl ① to chamber ⑧.

The result is that the pressure inside chamber ® surpasses the force of the spring ® and pushes piston ⑦ downwards.

This causes the sealing action of seal ① to be interrupted and the accumulated condensate in the bowl ① drains out through the drain cock ①. Turning drain cock ① manually counterclockwise lowers piston ②, which pushes open the seal created by seal ①, thus allowing the condensate to drain out

When pressure inside the bowl is released:

Even when pressure inside the bowl ① is released, the weight of the float ② causes valve ④, which is connected to lever ③, to seal valve seat ⑤. As a result, the inside of the bowl ① is shut off from the outside air.

Therefore, even if there is an accumulation of condensate in the bowl 1, it will not drain out.

When pressure is applied inside the bowl:

Even when pressure is applied inside the bowl ①, the weight of the float ② and the differential pressure that is applied to valve ④ cause valve ④ to seal valve seat ⑤, and the outside air is shut off from the inside of the bowl ①.

When the drain is accumulated in the bowl:

Float 2 rises due to its own buoyancy and the seal at valve seat 5 is interrupted.

The condensate inside the bowl ① drains out through the knob ⑥.

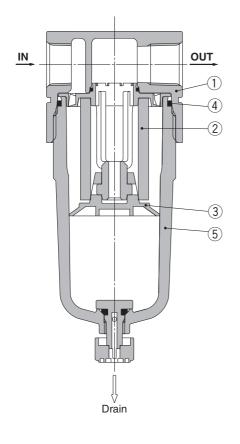

Turning knob (§) manually counterclockwise lowers it and causes the sealing action of valve seat (§) to be interrupted, which allows the condensate to drain out.

Specific Product Precautions

Be sure to read before handling. Refer to back cover for Safety Instructions, "Handling Precautions for SMC Products" (M-E03-3) and the Operation Manual for F.R.L. Precautions.

Design / Selection

⚠ Warning

1. The standard bowl for the air filter, filter regulator, and lubricator, as well as the sight dome for the lubricator and bowl guard are made of polycarbonate. Do not use in an environment where they are exposed to or come in contact with organic solvents, chemicals, cutting oil, synthetic oil, alkali, and thread lock solutions.

Effects of atmosphere of organic solvents and chemicals, and where these elements are likely to adhere to the equipment. Chemical data for substances causing degradation (Reference)

Air Supply

∕ Caution

- 1. Install an air filter (Series AF) as a pre-filter on the inlet side of the mist separator to prevent premature clog-
- 2. Install a mist separator (Series AFM) as a pre-filter on the inlet side of the micro mist separator to prevent premature clogging.
- 3. Do not install on the inlet side of the dryer as this can cause premature clogging of the element.

Maintenance

🗥 Warning

1. Replace the element every 2 years or when the pressure drop becomes 0.1 MPa, whichever comes first, to prevent damage to the element.

Mounting and Adjustment

∖ Caution

1. When the bowl is installed on the mist separator, or micro mist separator, install them so that the lock button lines up to the groove of the front (or the back) of the body to avoid drop or damage of the bowl.

Design

∕ Caution

1. Design the system so that the mist separator is installed in a pulsation-free location. The difference between internal and external pressure inside the element should be kept within 0.1 MPa, as exceeding this value could cause damage.

Selection

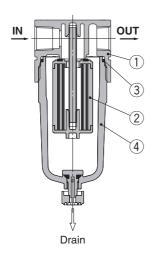

∕!\ Caution

- 1. Do not allow air flow that exceeds the rated flow. If the air flow is allowed outside the range of the rated flow even momentarily, drainage and lubricant may splash at the outlet side or cause damage to the component.
- 2. Do not use in a low pressure application (such as a blower). F.R.L. unit has its own minimum operating pressure depending on the equipment and is designed specifically to function with compressed air. If used below the minimum operating pressure, a loss of performance and malfunction can occur. Please contact SMC if an application under such conditions cannot be avoided.

Note 2) \Box in part numbers for a round pressure gauge indicates a type of connection thread. No indication is necessary for R; however, indicate N for NPT. Please contact SMC regarding the connection thread NPT and pressure gauge supply for psi unit specifications.

Specific Product Precautions

Be sure to read before handling. Refer to back cover for Safety Instructions, "Handling Precautions for SMC | Products" (M-E03-3) and the Operation Manual for F.R.L. Precautions.

Selection

⚠ Warning

1. Although exhaust of the residual pressure to the inlet side is possible when eliminating the inlet pressure, exhaust is not possible when the set pressure is 0.15 MPa or less. Use the regulator with backflow function.

Maintenance

🗥 Warning

1. When using the regulator between a solenoid valve and an actuator, check the pressure gauge periodically. Sudden pressure fluctuations may shorten the durability of the pressure gauge. A digital pressure gauge is recommended for such situation or as deemed necessary.

Mounting and Adjustment

⚠ Warning

- 1. Set the regulator while verifying the displayed values of the inlet and outlet pressure gauges. Turning the regulator knob excessively can cause damage to the internal parts.
- 2. Do not use tools on the pressure regulator knob as this may cause damage. It must be operated manually.

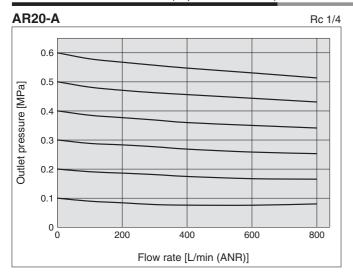

∕ Caution

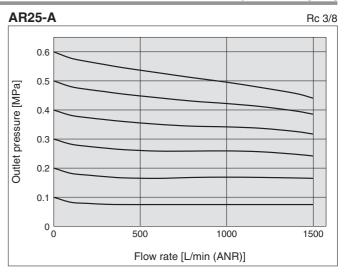

- Be sure to unlock the knob before adjusting the pressure and lock it after setting the pressure. Failure to follow this procedure can cause damage to the knob and the outlet pressure may fluctuate.
 - Pull the pressure regulator knob to unlock. (You can visually verify this with the "orange mark" that appears in
 - Push the pressure regulator knob to lock. When the knob is not easily locked, turn it left and right a little and then push it (when the knob is locked, the "orange mark", i.e., the gap will disappear).
- 2. Pulsation will be generated when the difference between the inlet and the outlet pressure is large. In this case, reduce the pressure difference between the inlet and the outlet. Consult SMC if the pulsation problem is not resolved.

Flow Characteristics (Representative values)

⚠ Specific Product Precautions

Be sure to read before handling. Refer to back cover for Safety Instructions, "Handling Precautions for SMC Products" (M-E03-3) and the Operation Manual for F.R.L. Precautions.

Selection

△Warning

- 1. Do not introduce air from the outlet side as this can damage the damper.
- 2. The standard bowl for the air filter, filter regulator, and lubricator, as well as the sight dome for the lubricator and bowl guard are made of polycarbonate. Do not use in an environment where they are exposed to or come in contact with organic solvents, chemicals, cutting oil, synthetic oil, alkali, and thread lock solutions.

Effects of atmosphere of organic solvents and chemicals, and where these elements are likely to adhere to the equipment. Chemical data for substances causing degradation (Reference)

△Caution

 Use a check valve (Series AKM) to prevent back flow of the lubricant when redirecting the air flow before the lubricator.

Maintenance

⚠Warning

- For the AL20-A type, replenish the lubricant after releasing the inlet pressure. Lubrication cannot take place under a pressurised condition.
- 2. Adjustment of the oil regulating valve for models from the AL20-A to AL40-A should be carried out manually. Turning it counterclockwise increases the dripping amount, and turning it clockwise reduces the dripping amount. The use of tools, etc. can result in damage to the unit. From the fully closed position, three rotations will bring it to the fully open position. Please do not rotate it any further than this. Note that the numbered scale markings are guidelines for adjusting the position, and not indicators of the dripping amount.

∧Caution

 Check the dripping amount once a day. Drip failure can cause damage to the components that need lubrication.

Mounting and Adjustment

∧Caution

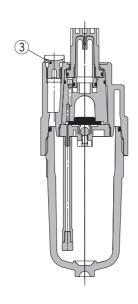

1. When the bowl is installed, install them so that the lock button lines up to the groove of the front (or the back) of the body to avoid drop or damage of the bowl.

		'	Pressure unit	Z Note 12)	Name plate, caution plate for bowl, and pressure gauge in imperial units: psi, °F	O Note 13)	O Note 13)	O Note 13)

- Note 1) Drain guide is NPT 1/8 (applicable to the AW20-A) and NPT 1/4 (applicable to the AW30-A to AW40-A). The auto drain port comes with ø3/8" One-touch fitting (applicable to the AW30-A to AW40-A).
- Note 2) Drain guide is G 1/8 (applicable to the AW20-A) and G 1/4 (applicable to the AW30-A to AW40-A).
- Note 3) Option B, G, H, M are not assembled and supplied loose at the time of shipment.
- Note 4) Assembly of a bracket and set nuts.
- Note 5) When pressure is not applied, condensate which does not start the auto drain mechanism will be left in the bowl. Releasing the residual condensate before ending operations for the day is recommended.
- Note 6) If the compressor is small (0.75 kW, discharge flow is less than 100 L/min[ANR]), air leakage from the drain cock may occur during start of operations. N.C. type is recommended.
- Note 7) When the pressure gauge is attached, a 1.0 MPa pressure gauge will be fitted for standard (0.7 MPa) type. 0.4 MPa pressure gauge for 0.2 MPa type.
- Note 8) Pressure can be set higher than the specification pressure in some cases, but use pressure within the specification
- Note 9) Refer to Chemical data on page 62 for chemical resistance of the bowl.
- Note 10) Standard material (polycarbonate)
- Note 11) Without a valve function
- Note 12) For thread type: NPT.
- Note 13) O: For thread type: NPT only

Note 1) Assembly of a bracket and set nuts

Note 2) ☐ in part numbers for a round pressure gauge indicates a type of connection thread. No indication is necessary for R; however, indicate N for NPT. Please contact SMC regarding the connection thread NPT and pressure gauge supply for psi unit specifications. Note 3) Minimum operating pressure: N.O. type–0.1 MPa; N.C. type–0.1 MPa (AD27-A) and 0.15 MPa (AD37-A/47-A).

Please consult with SMC separately for psi and °F unit display specifications.

Note 4) Please consult SMC for details on drain piping to fit NPT or G port sizes. The bowl assembly includes the bowl O-ring.

⚠ Specific Product Precautions

Be sure to read before handling. Refer to back cover for Safety Instructions, "Handling Precautions for SMC Products" (M-E03-3) and the Operation Manual for F.R.L. Precautions.

Design / Selection

- Although exhaust of the residual pressure to the inlet side is possible when eliminating the inlet pressure, exhaust is not possible when the set pressure is 0.15 MPa or less. Use the regulator with backflow function.
- 2. The standard bowl for the air filter, filter regulator, and lubricator, as well as the sight dome for the lubricator and bowl guard are made of polycarbonate. Do not use in an environment where they are exposed to or come in contact with organic solvents, chemicals, cutting oil, synthetic oil, alkali, and thread lock solutions.

Effects of atmosphere of organic solvents and chemicals, and where these elements are likely to adhere to the equipment. Chemical data for substances causing degradation (Reference)

Maintenance

⚠ Warning

1. Replace the element every 2 years or when the pressure drop becomes 0.1 MPa, whichever comes first, to prevent damage to the element.

Mounting and Adjustment

Marning

- Set the regulator while verifying the displayed values of the inlet and outlet pressure gauges. Turning the regulator knob excessively can cause damage to the internal parts.
- **2.** Do not use tools on the pressure regulator knob as this may cause damage. It must be operated manually.

Mounting and Adjustment

∧ Caution

- Be sure to unlock the knob before adjusting the pressure and lock it after setting the pressure. Failure to follow this procedure can cause damage to the knob and the outlet pressure may fluctuate.
 - Pull the pressure regulator knob to unlock. (You can visually verify this with the "orange mark" that appears in the gap.)
 - Push the pressure regulator knob to lock. When the knob is not easily locked, turn it left and right a little and then push it (when the knob is locked, the "orange mark", i.e., the gap will disappear).
- 2. Pulsation will be generated when the difference between the inlet and the outlet pressure is large. In this case, reduce the pressure difference between the inlet and the outlet. Consult SMC if the pulsation problem is not resolved.
- 3. When the bowl is installed, install them so that the lock button lines up to the groove of the front (or the back) of the body to avoid drop or damage of the bowl.
- **4.** When the bowl is installed on the mist separator, or micro mist separator, install them so that the lock button lines up to the groove of the front (or the back) of the body to avoid drop or damage of the bowl.

⚠ Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of "Caution," "Warning" or "Danger." They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)*1), and other safety regulations.

Caution indicates a hazard with a low level of risk Caution: which, if not avoided, could result in minor or moderate injury.

Warning indicates a hazard with a medium level of Warning: risk which, if not avoided, could result in death or serious injury.

⚠ Danger :

Danger indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

*1) ISO 4414: Pneumatic fluid power - General rules relating to systems. ISO 4413: Hydraulic fluid power – General rules relating to systems. IEC 60204-1: Safety of machinery – Electrical equipment of machines. (Part 1: General requirements)

ISO 10218-1: Manipulating industrial robots - Safety.

⚠ Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications. Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalogue information, with a view to giving due consideration to any possibility of equipment failure when configuring the

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

- 3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.
 - 1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects
 - 2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
 - 3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.
- 4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following
 - 1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
 - 2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the
 - 3. An application which could have negative effects on people, property, or animals requiring special safety analysis.
 - 4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation

1. The product is provided for use in manufacturing industries.

The product herein described is basically provided for peaceful use in manufacturing industries.

If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary.

If anything is unclear, contact your nearest sales branch.

Limited warranty and Disclaimer/ Compliance Requirements

The product used is subject to the following "Limited warranty and Disclaimer" and "Compliance Requirements".

Read and accept them before using the product.

Limited warranty and Disclaimer

- 1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, wichever is first.*2)
 - Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
- 2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided. This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
- 3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalogue for the particular products.
 - *2) Vacuum pads are excluded from this 1 year warranty.

A vacuum pad is a consumable part, so it is warranted for a year after it is delivered.

Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty

Compliance Requirements

- 1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
- 2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

Be sure to read "Handling Precautions for SMC Products" (M-E03-3) before using.
