

**Pinza pneumatica a 2 griffe ad azione parallela autocentrante (serie PE)**

- Azionamento a doppio effetto (a semplice effetto su richiesta per PE-25... e PE-45...).
- Assenza di organi di trasmissione: elevato rendimento e affidabilità.
- Possibilità di scelta su un'ampia gamma di corse.
- Forza di serraggio costante su tutta la corsa in apertura ed in chiusura.
- Basso peso ottenuto con una costruzione interamente in lega leggera.
- Grasso alimentare FDA-H1.

**2-jaw parallel self-centering pneumatic gripper (series PE)**

- Double acting (single acting upon request for PE-25... and PE-45...).
- High efficiency and reliability due to the lack of driving parts.
- Wide choice of stroke length options.
- The gripping force is constant on both directions along total stroke.
- Light weight; due to its alloy construction.
- FDA-H1 food-grade grease.

### Forza di serraggio

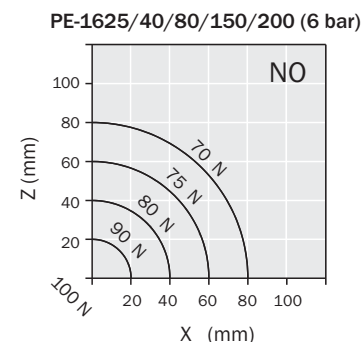

I grafici mostrano la forza per griffa espressa dalla pinza in funzione della pressione, del braccio Z e del disassamento del punto di presa X.

### Gripping force

The graphs show the gripping force on each jaw, as a function of the operating pressure, the gripping tool length Z and the overhanging X.

La forza indicata in questi grafici è riferita alla singola griffa. La forza totale è il doppio.

The force shown in these graphs refers to one jaw. The total force is double.

### Fissaggio della pinza

La pinza PE-16... può essere montata in posizione fissa oppure su parti in movimento: in questo caso va considerata la forza d'inerzia cui la pinza ed il suo carico sono sottoposti.

Per fissare la pinza utilizzare i due fori calibrati (A) ed almeno quattro fori filettati (B) presenti sulla base inferiore del corpo pinza.

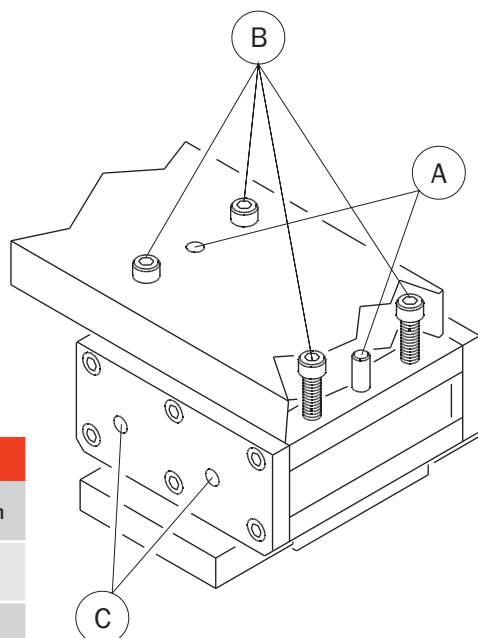

Lasciare lo spazio necessario per i raccordi dell'aria (C) e per il posizionamento dei sensori nelle cave laterali.

### Gripper fastening

The gripper PE-25... can be fastened to a static or moving part. When on a moving part, you must pay attention to the forces created by inertia on the gripper and its load.

To fasten the gripper, use the two dowel pin holes (A) and at least four threaded holes (B) on the base of the gripper.

Allow room to mount the air fittings (C) and the sensors.

		PE-16...
A	Fori calibrati Dowel pin holes	Ø5H8x5 mm
B	Fori filettati Threaded holes	M5x5 mm
C	Fori filettati per raccordi aria Threaded holes for air fittings	M5

### Fissaggio delle estremità di presa

Costruire le dita di presa il più possibile corte e leggere.

Fissarle su ciascuna griffa utilizzando almeno due viti e due spine di centraggio.

### Gripping tool fastening

The gripping tools must be as short and light as possible.

They must be mounted using at least two screws and two dowel pins per jaw.

### Fissaggio delle estremità di presa

Costruire le dita di presa il più possibile corte e leggere.

Fissarle su ciascuna griffa utilizzando almeno due viti delle 4 viti.

Per il centraggio di precisione posizionare le linguette nelle sedi sulle griffe.

### Gripping tool fastening

The gripping tools must be as short and light as possible.

They must be mounted using at least two of four screws.

They must be centered using the key-slots on the jaws.

Sede linguetta D Key-slot D	$10^{+0.05} \times 28 \times 3$ mm
Fori filettati Threaded holes	M8x16 mm

Sede linguetta E Key-slot E	$10^{+0.05} \times 25 \times 3$ mm
Fori filettati Threaded holes	M8x16 mm

## Carichi di sicurezza

Consultare la tabella per i carichi massimi ammissibili. Forze e coppie eccessive possono danneggiare la pinza e causare difficoltà di funzionamento compromettendo la sicurezza dell'operatore.

$F_s$ ,  $M_x s$ ,  $M_y s$ ,  $M_z s$ , sono i carichi massimi ammissibili in condizioni statiche, cioè con le griffe ferme.

$F_d$ ,  $M_x d$ ,  $M_y d$ ,  $M_z d$ , sono i carichi massimi ammissibili in condizioni dinamiche, cioè con le griffe in movimento.

Inoltre sono riportate le masse ammissibili ( $m$ ) per ogni dito di presa in funzione del tempo di apertura o chiusura. Usare i regolatori di flusso (non forniti) per ottenere la velocità desiderata.

## Safety loads

Check the table for maximum permitted loads.

Excessive forces or torques can damage the gripper, cause functioning troubles and endanger the safety of the operator.  $F_s$ ,  $M_x s$ ,  $M_y s$ ,  $M_z s$ , are maximum permitted static loads. Static means motionless jaws.

$F_d$ ,  $M_x d$ ,  $M_y d$ ,  $M_z d$ , are maximum permitted dynamic loads. Dynamic means running jaws.

The following tables show the specified maximum loads ( $m$ ) on each gripping tool as function of closing or opening time. Use flow controllers (not supplied) to get the proper speed.

**Sensori**

Il rilevamento della posizione di lavoro è affidato a uno o più sensori magnetici di prossimità (opzionali), che rilevano la posizione attraverso i magneti sui pistoni. Quindi, per un corretto funzionamento, è da evitare l'impiego in presenza di forti campi magnetici od in prossimità di grosse masse di materiale ferromagnetico.

Per il montaggio:

- 1- Inserire il dado quadrato (A) nella propria sede sull'adattatore "S 00".
- 2- Infilare l'adattatore nella guida sulla pinza.
- 3- Calzare il sensore sull'adattatore.
- 4- Fare scorrere nella guida fino a raggiungere la posizione di lavoro desiderata (led acceso).
- 5- Bloccare con la vite (B), facendo attenzione a non serrarla eccessivamente.

**Sensors**

The operating position can be checked by magnetic sensors (optional), that detect the magnets on the pistons inside. Therefore a near big mass of ferromagnetic material or intense magnetic fields may cause sensing troubles.

For mounting:

- 1- Insert the square nut (A) in its seat on the "S 00" bracket.
- 2- Insert the bracket into the groove.
- 3- Insert the sensor into the bracket.
- 4- Run the sensor until the lamp is on.
- 5- Lock the bracket with the screw (B) but don't over-tighten it.

**Connessione pneumatica**

La pinza si alimenta con aria compressa dai fori laterali (P e R) montandovi i raccordi dell'aria ed i relativi tubi (non forniti).

La pinza è azionata con aria compressa filtrata (5÷40 µm) non necessariamente lubrificata.

La scelta iniziale, lubrificata o non lubrificata, deve essere mantenuta per tutta la vita della pinza.

L'impianto pneumatico deve essere pressurizzato gradualmente, per evitare movimenti incontrollati.

**Compressed air feeding**

The compressed air feeding is accomplished on the lateral air ports (P and R) with fittings and hoses (not supplied).

The compressed air, must be filtered from 5 to 40 µm.

Maintain the medium selected at the start, lubricated or not, for the complete service life of the gripper.

The pneumatic circuit must be pressurized progressively, to avoid uncontrolled movements.

**Circuito pneumatico**

Possibili inconvenienti sul circuito di alimentazione dell'aria compressa:

- 1- Oscillazioni di pressione.
- 2- Riempimento pinza vuota all'avvio.
- 3- Improvvisa mancanza di pressione.
- 4- Velocità di azionamento eccessiva.

Accorgimenti per risolvere i problemi:

- 1- Serbatoio esterno (A).
- 2- Valvola di avviamento progressivo (B).
- 3- Valvole di sicurezza (C).
- 4- Regolatori di flusso (D).

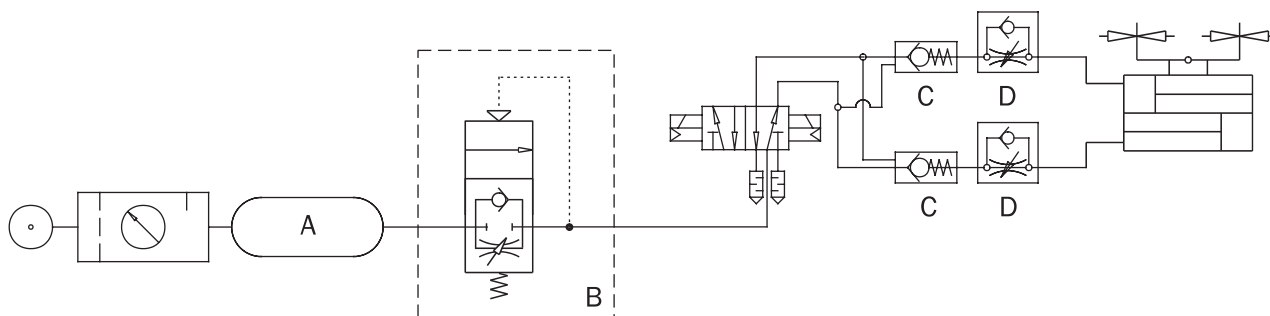

**Pneumatic circuit**

Possible problems on a compressed air circuit:

- 1- Pressure variation.
- 2- Pressurizing with empty cylinders.
- 3- Sudden pressure black-out.
- 4- Excessive speed of the jaws.

Possible solutions:

- 1- Compressed air storage (A).
- 2- Start-up valve (B).
- 3- Safety valve (C).
- 4- Flow controller (D).

### Manutenzione

La pinza va ingrassata ogni 10 milioni di cicli con:

- BERULUB FG-H 2 EP

(Lubrificante NSF H1 Registrazione No. 140486).

Il gioco delle griffe è indicato qui sotto.

### Maintenance

Grease the gripper after 10 million cycles with:

- BERULUB FG-H 2 EP

(Lubricant NSF H1 Registration No. 140486).

The figure below shows the jaw backlash.

### Avvertenze

Evitare il contatto con sostanze corrosive, spruzzi di saldatura, polveri abrasive, che potrebbero danneggiare la funzionalità della pinza.

Per nessun motivo, persone od oggetti estranei devono entrare nel raggio d'azione della pinza.

La pinza non deve essere messa in servizio prima che la macchina di cui fa parte sia stata dichiarata conforme alle disposizioni di sicurezza vigenti.

### Caution

Avoid the gripper coming into contact with the following media: coolants which cause corrosion, grinding dust or glowing sparks. Make sure that nobody can place his/her hand between the gripping tools and there are no objects in the path of the gripper. The gripper must not run before the whole machine, on which it is mounted, complies with the laws or safety norms of your country.
